R = 0.08206 L atm/mol K

R = 8.314 J/mol K

 $N_{\rm A} = 6.022 \times 10^{23} \ / {\rm mol}$ 

 $h = 6.626 \times 10^{-34} \text{ J} \cdot \text{s}$ 

 $c = 3.00 \times 10^8 \text{ m/s}$ 

 $F=96485~\mathrm{C/mol~e^-}$ 

 $e = 1.602 \times 10^{-19}~{\rm C}$ 

 $m_{\rm e} = 9.11 \times 10^{-31} \text{ kg}$ 

## Rydberg Constants

 $\mathcal{R} = 2.18 \times 10^{-18} \text{ J}$ 

 $\mathcal{R} = 3.29 \times 10^{15}~\rm s^{-1}$ 

 $\mathcal{R} = 1.097 \times 10^7 \text{ m}^{-1}$ 

## conversions

1 atm = 760 torr

1 atm = 101325 Pa

1 atm = 1.01325 bar

1 atm = 14.7 psi

 $1 \text{ bar} = 10^5 \text{ Pa}$ 

1 in = 2.54 cm

1 mi = 5280 ft

 $1 \text{ Å} = 10^{-10} \text{ m}$ 

1 lb = 453.6 g

1 ton = 2000 lbs

1 tonne = 1000 kg

 $1~\mathrm{gal} = 3.785~\mathrm{L}$ 

 $1 \text{ gal} = 231 \text{ in}^3$ 

1 fl oz = 29.57 mL

## conversions

1 cal = 4.184 J

 $1~{\rm eV} = 1.602 \times 10^{-19}~{\rm J}$ 

 $1~\mathrm{kWh} = 3600~\mathrm{J}$ 

## water data

 $C_{\rm s,ice} = 2.09 \text{ J/g }^{\circ}\text{C}$ 

 $C_{\rm s,water} = 4.184 \text{ J/g} \, ^{\circ}\text{C}$ 

 $C_{\rm s,steam} = 2.03 \text{ J/g }^{\circ}\text{C}$ 

 $\rho_{\mathrm{water}} = 1.00 \; \mathrm{g/mL}$ 

 $\rho_{\rm ice} = 0.9167~{\rm g/mL}$ 

 $\rho_{\rm seawater} = 1.024 \text{ g/mL}$ 

 $\Delta H_{\rm fus} = 334 \text{ J/g}$ 

 $\Delta H_{\rm vap} = 2260 \text{ J/g}$ 

 $K_{\rm w} = 1.0 \times 10^{-14}$ 

This exam should have exactly 25 questions. Each question is equally weighted at 4 points each. You will enter your answer choices on the virtual bubblehseet after you have finished. Your score is based on what you submit on the virtual bubblesheet and not what is circled on the exam.

- 1. Carbon dioxide has a carbon-oxygen double bond. Carbon monoxide has a carbon-oxygen triple bond. Which of the following statements is true?
- a. the bonds in carbon monoxide are stronger and longer than the bonds in carbon dioxide
- •b. the bonds in carbon monoxide are stronger and shorter than the bonds in carbon dioxide
- c. the bonds in carbon monoxide are weaker and longer than the bonds in carbon dioxide
- d. the bonds in carbon monoxide are weaker and shorter than the bonds in carbon dioxide

**Explanation:** A triple bond is stronger and shorter than a double bond.

- 2. Which of the following molecules can readily absorb IR radiation?
- I. Ar
- II.  $O_2$
- III.  $CO_2$
- IV.  $CH_2F_2$
- a. I and III
- b. I, II, III, and IV
- c. I and IV
- d. I, II, and IV
- •e. III and IV

**Explanation:** Carbon dioxide and HFCs are greenhouse gases capable of absorbing IR radiation.

- **3.** Catalysts have a whole set of properties. Which of the following is the MAIN thing that catalysts do for chemical reactions?
- a. make more limiting reactants
- b. stop them
- c. make them emit radiation
- •d. speed them up
- e. make them reverse in direction

**Explanation:** All catalysts speed up reactions.

- 4. Chlorofluorocarbons (CFC) use as refrigerants has impacted the environment because they...
- a. inadvertently caused an increase in carbon monoxide which is a toxic pollutant.
- b. depleted ozone at ground level via direct reaction.
- •c. provided the source of the catalyst that causes ozone depletion.
  - d. were toxic when inhaled in small quantities.
  - e. rapidly cooled down the air due to their thermal properties.

**Explanation:** CFC use has impacted the environment because they produce chlorine atoms which act as catalysts in ozone depletion.

- 5. The overall energy exchange of our earth with the surrounding universe is and example of \_\_\_\_\_\_.
- a. the Chapman Cycle
- b. dynamic equilibrium
  - c. electric potential
- d. static equilibrium

**Explanation:** The earth has equal amounts of energy IN and OUT. But the energy is in constant flux which means there is a dynamic equilibrium constantly in play. (see notes from 10/20).

- **6.** Which of the following is a reason why greenhouse gases are important to our ecosystems?
- a. The planet would be much warmer without greenhouse gases.
- b. Greenhouse gases absorb about 99% of the total radiation from the sun.
- c. Greenhouse gases account for the majority of our atmosphere.
- d. Without greenhouse gases, global temperatures would average around -15° C.

**Explanation:** Greenhouse gases make up a minuscule fraction of our atmosphere, but without them, global temperatures would be much colder.

- 7. When comparing  $N_2$  and  $Cl_2$ , does  $N_2$  have a longer or shorter bond length, a stronger or weaker bond, and is it more or less stable than  $Cl_2$ ?
- a. shorter, stronger, less stable
- b. shorter, weaker, less stable
- c. longer, weaker, less stable
- d. longer, weaker, more stable
- e. longer, stronger, more stable
- •f. shorter, stronger, more stable

**Explanation:**  $N_2$  has a bond order of 3, while  $Cl_2$  only has a bond order of 1. Higher bond order corresponds to shorter bonds, stronger bonds, and more stable bonds.

- 8. SeCl<sub>4</sub> has four bonds and one lone pair. What are the electronic and molecular geometries, respectively?
- a. square pyramidal, seesaw
- •b. trigonal bipyramidal, seesaw
- c. seesaw, trigonal bipyramidal
- d. trigonal planar, tetrahedral
- e. seesaw, square pyramidal

**Explanation:** A molecule with five total areas of electron density assumes a trigonal bipyramidal electronic geometry. If only one area is a lone pair, you have AX<sub>4</sub>E which leaves 4 bonded atoms in a see-saw molecular geometry. The 1 lone pair occupies an equatorial position (allowing maximal bond angles between the lone pair and the adjacent areas of electron density)

- 9. Which of the following is not capable of hydrogen bonding?
- a.  $CH_3CH_2NH_2$
- b.  $H_2O$
- ●c. CH<sub>3</sub>CH<sub>2</sub>F
  - d.  $CH_3CH_2CH_2OH$
- e. HF

**Explanation:** CH<sub>3</sub>CH<sub>2</sub>F is the only option which does not have a hydrogen bound to one of the 3 most electronegative elements: N, O, F. An H bound to one of these atoms is necessary to hydrogen bond.

- 10. What is the formal charge on nitrogen for the nitrate resonance structure shown below?
- a. +3
- ●b. +1
  - c. -
  - d. +5
  - e. 0

**Explanation:** FC = valence electrons - (bonds + lone pair electrons)

+1 = 5 - 4

- 11. A molecule has three bonds and three lone pairs. What is the molecular geometry?
- a. trigonal pyramid
- b. trigonal planar
- •c. T-shape
- d. octahedral
- e. see-saw

**Explanation:** This will be a T-shaped molecular geometry because it is  $AX_3E_3$  which is octahedral electronic geometry with 3 positions removed (lone pairs).

- 12. Which of the following best describes the bonds in the hybrid resonance structure for nitrite,  $NO_2^-$ ?
- •a. two N-O 1.5 bonds
  - b. a single N-O bond and a double N-O bond resonating back and forth
- c. a single N-O bond and a double O-O bond resonating back and forth
- d. two N-O single bonds

**Explanation:**  $NO_2^-$  is a resonant structure consisting of N-O bonds that have an average 1.5 bond order.

- 13. What is the product of the ozone-depleting mechanism that allows one chlorine atom to destroy around 100,000 ozone molecules in the stratosphere?
- a. chlorine gas
- b. oxygen gas
- •c. a chlorine radical
- d. ozone

**Explanation:** The chlorine radical is a catalyst for the depletion of ozone. It is both a reactant and a product of the ozone-depleting mechanism.

- 14. Why are HFCs, the newest refrigerants in use, considered unsustainable?
- •a. HFCs are extremely potent greenhouse gases.
  - b. HFCs are rapidly depleting the ozone layer.
- c. HFCs emit harmful UV radiation.
- d. HFCs are cooling down the ozone layer.

**Explanation:** The current concern with HFCs is that they are potent greenhouse gases, even though they do not negatively impact the ozone layer like HCFCs and CFCs.

- 15. What is the molecular geometry for NBr<sub>3</sub>?
- a. octahedral
- •b. trigonal pyramid
  - c. T-shape
  - d. tetrahedral
  - e. trigonal planar

**Explanation:** The nitrogen will have three bonds and one lone pair. This will be a trigonal pyramidal molecular geometry.

- 16. Which arrow(s) is/are pointing to a central atom with a trigonal planar molecular geometry?
- a. A, B, C, and D
- •b. A, B, and C only
  - c. B and C only
  - d. A and B only
  - e. A and C only

HO D D

**Explanation:** When you account for implied hydrogens where necessary, you will see that arrows A, B, and C point to trigonal planar geometries.

- 17. Draw ozone and then determine which of the following statements is/are true.
- I. ozone has a trigonal planar electronic geometry
- II. the bond angles in ozone are approximately 109.5°
- III. the bonds in ozone are weaker than the bond angles in diatomic oxygen
- IV. ozone has a bent molecular geometry
- a. I and III
- b. I, II, and IV
- c. I, II, III, and IV
- •d. I, III, and IV
- e. I and IV

**Explanation:** The ozone molecule is a resonant structure with a bond order equal to about 1.5, which will result in weaker bonds than oxygen. The structure has a trigonal planar electronic geometry and a bent molecular geometry. The bond angles are slightly less than  $120^{\circ}$ .

- 18. What is the molecular geometry of  ${\rm BrF}_5$ ? (Hint: it has one lone pair)
- a. tetrahedral
- b. square pyramid
- c. octahedral
- d. trigonal bipyramid
- e. square planar

**Explanation:**  $BrF_5$  has 5 bonds and one lone pair. This points to square pyramid geometry.

- 19. One of the best properties of refrigerants (freons) used in the previous century seemed "good". Later, we found that property to actually be somewhat "bad". What is that property?
- •a. relative inertness
- b. adsorbers of CO<sub>2</sub>
- c. great heat exchangers
- d. highly polar

**Explanation:** Inertness. They stayed in the atmosphere for years and years. This allowed them to easily reach the ozone layer and begin to react and initiate ozone depletion.

20. What are the bond angles at positions labeled A, B, and C (in that order)?

$$\begin{array}{c|c} & & & \\ &$$

- a.  $120^{\circ}$ ,  $120^{\circ}$ ,  $120^{\circ}$
- b. 109.5°, 120°, 178°
- c.  $107^{\circ}$ ,  $109.5^{\circ}$ ,  $90^{\circ}$
- d.  $120^{\circ}$ ,  $109.5^{\circ}$ ,  $109.5^{\circ}$
- •e. 120°, 107°, 104.5°

Explanation: The aldehyde at position A has 3 areas of electron density and no lone pairs, creating a trigonal planar shape with bond angles of 120. The amine at position B has a core tetrahedral electronic geometry around the nitrogen, with 3 bonds and 1 (implied) lone pair. The lone pair squeezes the remaining bond angles to slightly less than 109.5 - meaning we tweak the angle down to 107. Last, the oxygen at position C has two lone pairs as well as the bonds to the carbon and hydrogen atoms. The core tetrahedral geometry is tweaked by the two lone pairs so that the final bent configuration of the C-O-H bond is a double tweak resulting in 104.5.

21. (Part 1 of 4) How many carbon atoms are in this structure?

- a. 19
- •b. 22
  - c. 18
  - d. 20
  - e. 21

Explanation: There are 22 carbons.

- 22. (Part 2 of 4) That was so much fun, lets now count the hydrogens. How many hydrogens are in this structure.?
- a. 27
- b. 25
- ●c. 28
  - d. 26
  - e. 24
- f. 30

**Explanation:** There are 28 hydrogens.

- **23.** (Part 3 of 4) There is a marked bond angle. What is the value of that bond angle?
- a.  $90^{\circ}$
- b. 180°
- ●c. 109.5°
  - d. 117°
  - e. 120°

**Explanation:** That is a C with 2 bonds to other C's and 2 more bonds to implied H's. That is 4 regions which means it is tetrahedral with a bond angle of 109.5°.

- 24. (Part 4 of 4) The structure doesn't explicitly show any lone pairs, although there are some lone pairs. How many lone pairs are on this molecule?
- a. 5
- b. 6
- c. 2
- •d. 4
  - e. 3

**Explanation:** Each of the two N's have 1 LP each. The O has two lone pairs. That is a total of 4 lone pairs.

- 25. Which substance listed is a polar covalent compound?
- a. KBr
- b.  $H_2$
- $c. F_2$
- $d. MgI_2$
- ●e. CH<sub>3</sub>OH

**Explanation:** The only polar covalent molecule listed here is CH<sub>3</sub>OH. The KBr and the MgI<sub>2</sub> are both ionic compounds.

After you are finished and have all your answers circled, go to the front of the room and then use the QR code there to pull up the virtual answer page. Enter the appropriate info plus all your answers - click the SUBMIT button. Make sure you get the confirmation screen and show it to the TA or proctor. After that, turn in your exam and scratch paper. You're free to leave after that.
