$\Delta H_{\text{vap}} = 2260 \text{ J/g}$

$K_w = 1.0 \times 10^{-14}$

This exam should have exactly 25 questions. Each question is equally weighted at 4 points each. Bubble in your answer choices on the online bubbleseet provided. Your score is based on what you bubble on the bubblesheet and not what is circled on the exam.

1. Chlorine is exposed to radiation and breaks into two identical chlorine radicals (shown below). This is an example of...

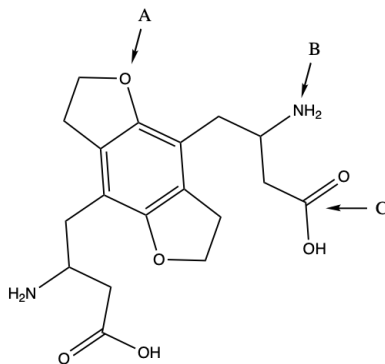

- a. heterolytic cleavage
- b. homonuclear fusion
- c. condensation
- d. homoisomeric cleavage
- e. homolytic cleavage

Explanation: The cleavage of a molecule into two identical parts is known as homolytic cleavage.

2. (Part 1 of 2) If you look at it long enough, the following molecule starts to look like an adorable little critter. What is the functional group labeled A?

- a. aldehyde
- b. amide
- c. ketone
- d. ether
- e. alcohol
- f. carboxylic acid
- g. amine

Explanation: The R-O-R group is an ether.

3. (Part 2 of 2) What is the functional group labeled B?

- a. amine
- b. alcohol
- c. amide
- d. carboxylic acid
- e. ketone
- f. aldehyde

Explanation: The -NH₂ group is an amine.

4. (Part 3 of 3) What is the functional group labeled C?

- a. amine
- b. alcohol
- c. amide
- d. aldehyde
- e. ketone
- f. carboxylic acid

Explanation: This is a carboxylic acid.

5. Dr. McCord said he still has a lot of old records (LPs) that play on a turntable. What are these records made from?

- a. PET
- b. PVC
- c. PS
- d. HDPE
- e. LDPE
- f. PP

Explanation: PVC is used to make vinyl records. The "V" in PVC stands for vinyl. Now very trendy and your hipster friends talk about their lit vinyl collection.

6. Given the reaction below, what reactant should be used in order to create the product?

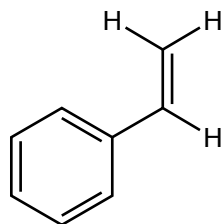

- a. CH_3Cl
- b. Cl_2
- c. BrCl
- d. HCl
- e. HOCl

Explanation: HCl is added across the double bond

7. Identify the plastic from the structure of its monomer.

- a. PS
- b. PET
- c. HDPE
- d. PP
- e. LDPE
- f. PVC

Explanation: This is PS.

8. Which of the following polymers is the “new” version of the steel-belted radial tire?

- a. silk
- b. kevlar
- c. nylon
- d. bakelite
- e. polypropylene
- f. teflon

Explanation: Kevlar is used to make belted radial tires (and bulletproof vests).

9. Polyethylene can be fashioned into strong milk containers and flimsy plastic bags. Which particular type of polyethylene is used to make the opaque milk containers and why?

- a. LDPE because it is more branched
- b. LDPE because it is a linear polymer
- c. HDPE because it is more branched
- d. HDPE because it a linear polymer

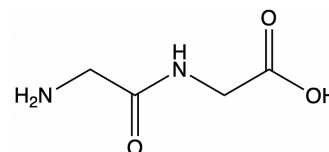

Explanation: HDPE can make liquid containers because it is more linear, creating a more rigid plastic.

10. What is one major difference between LDPE and HDPE?

- a. LDPE contains less branching which makes it more rigid and a much more crystalline-like substance.
- b. HDPE has a lower melting point than LDPE because LDPE is a stronger substance.
- c. Unlike HDPE, LDPE is not made via radical initiated reaction.
- d. Unlike LDPE, HDPE uses a special catalyst to make a completely straight chain with little branching.

Explanation: none

11. The image below is a dipeptide, an organic compound derived from two amino acids.

Which of the following statements is true?

- a. The compound contains a primary amine and a tertiary amine.
- b. The compound contains an amide link.
- c. The two amino acids that formed this dipeptide reacted in an addition reaction mechanism.
- d. The compound contains an ester link.

Explanation: none

12. Which of the following is a set of two sugar-based polymers?

- a. cellulose and starch
- b. wool and rubber
- c. cellulose and PET
- d. starch and PET
- e. wool and silk

Explanation: Cellulose and starch are repeating glucose monomers.

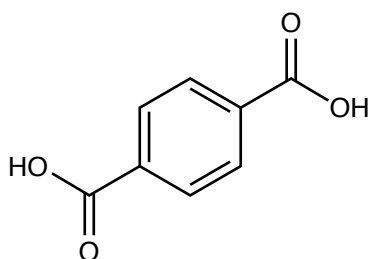

13. Which feature differentiates RNA nucleotides and allows them to code for the production of different proteins?

- a. the nitrogenous base
- b. the ribose sugar
- c. the deoxyribose sugar
- d. the phosphate group
- e. the R-group

Explanation: The nitrogenous base of an RNA nucleotide differentiates it. All RNA nucleotides consist of a ribose sugar and a phosphate group.

14. The following structure is a precursor (reactant) to make one of the polymers we have studied. Which polymer (plastic) is it?

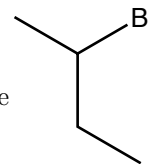

- a. PET
- b. PS
- c. nylon
- d. cellulose
- e. proteins
- f. bakelite

Explanation: The structure is terephthalic acid which is mixed with glycol to make PET (polyethylene terephthalate).

15. Name the compound shown below.

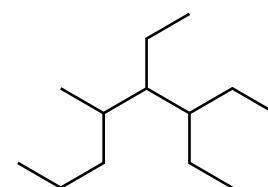

- a. 3-bromobutane
- b. 2-bromopentane
- c. 1-bromo-1-methylpropane
- d. 2-bromobutane
- e. 4-bromobutane

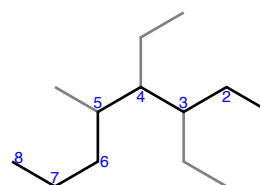

Explanation: longest chain is 4-carbons and the there is a bromine on position 2. 2-bromobutane.

16. What is the name of this compound?

- a. 3,4,5-triethyloctane
- b. 3,4-diethyl-5-methyloctane
- c. 2-propyl-3,4-diethyloctane
- d. 3,4-diethyl-2-propylhexane
- e. 5,6-diethyl-4-methyloctane
- f. 2-propyl-3,4-diethylhexane

Explanation: There are 8 carbons in the chain. 3 branch points with two ethyl groups at positions 3 and 4, and a methy group at position 5. Go alphabetical on ordering, so ethyls are first to get 3,4-diethyl-5-methyloctane.

17. Which of the following plastics is NOT formed by an addition mechanism?

- a. PET
- b. PS
- c. PVC
- d. PP
- e. LDPE
- f. HDPE

Explanation: PET is formed via condensation.

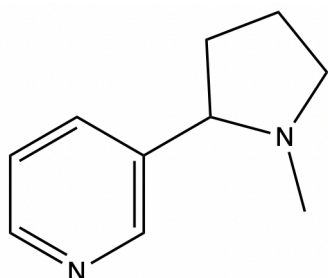

18. Which step of the addition mechanism will create a free radical on a growing polymer chain?

- a. termination
- b. initiation
- c. propagation
- d. elimination
- e. substitution

Explanation: The propagation step will grow the polymer chain by one monomer unit and create a radical on the opposite end.

19. The structure show below is that of a psychoactive stimulant drug that is found in tobacco products. What is the *complete* chemical formula of this drug?

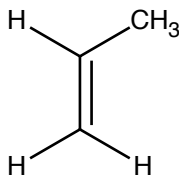

- a. $C_{10}H_{12}N_2$
- b. $C_9H_{12}N_2$
- c. $C_9H_{10}N_2$
- d. $C_9H_8N_2$
- e. $C_{10}H_{10}N_2$
- f. $C_{10}H_{14}N_2$
- g. $C_{10}H_7N_2$

Explanation: There are 10 carbons, 14 hydrogens, and two nitrogens.

20. Identify the plastic from the structure of its monomer.

- a. HDPE
- b. PET
- c. PVC
- d. LDPE
- e. PS
- f. PP

Explanation: This is propene, or propylene which makes PP (polypropylene).

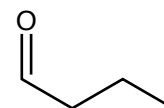

21. What is the name of the product for the following addition reaction?

- a. 4 - bromohexane
- b. 4,5 - dibromohexane
- c. 2,3 - dibromohexane
- d. 1,2 - bromohexane
- e. 2 - bromohexane

Explanation: In the addition reaction, one bromine atom will be placed on each of the carbons sharing a double bond to create the following product: The IUPAC name for this organic compound is 2,3 - dibromohexane because the carbons with the bromine substituents are at carbons 2 and 3, and there are a total of six carbons for the molecule to be a hexane.

22. What is the functional group on propanal (shown below)?

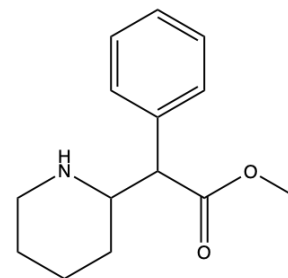

- a. ketone
- b. hydroxyl
- c. alkene
- d. alcohol
- e. aldehyde

Explanation: A terminal carbonyl group is an aldehyde.

23. Methylphenidate, better known as Ritalin, is a medication that can treat ADHD and narcolepsy. What are two functional groups shown on the ritalin molecule below?

- a. secondary amine, ester
- b. secondary amine, ether
- c. nitrile, ketone
- d. primary amine, ester
- e. nitrile, ether

Explanation: The main functional groups on this molecule include a secondary amine and an ester.

24. Which of the following functional groups contain a carbonyl group?

- I. ketone
 - II. aldehyde
 - III. alcohol
 - IV. carboxylic acid
- a. I, III, and IV
 - b. I, II, III, and IV
 - c. I, II, and IV
 - d. II and IV
 - e. I and IV

Explanation: A carbonyl group is a carbon with a double bond to oxygen. Ketones, carboxylic acids, and aldehydes all contain carbonyl groups.

25. Five of the Big 6 plastics are all either composed or direct substitutions of which monomer?

- a. methylamine
- b. ethyne
- c. ethylene
- d. diamine
- e. polychloroethane

Explanation: Five of the Big 6 plastics are composed of ethene (ethylene), $\text{H}_2\text{C}=\text{CH}_2$.

After you are finished and have all your answers circled, go to the front of the room and then use the QR code show below to pull up the virtual answer page for your exam. Enter the appropriate info plus all your answers - click the SUBMIT button. Double check your choices on the next page. Once you are sure, click the submit button on that page to enter your answers. Make sure you get the confirmation screen (different background color!) and show it to the TA or proctor. After that, turn in your exam and scratch paper. You're free to leave after that.
